

## 2-4 Project Program in Neurobiology

Our experience parallels that of the Interdepartmental Neuroscience Program, and our response is thus the same as theirs. We have clear benchmarks in year 2 and by the end of year 3 (the Qualifying Exam and thesis prospectus, respectively). Thus, the beginning of the third year is the time most in need of additional monitoring. The DGS will meet yearly with students, adding now this meeting in the third year, to make sure research is on track in the selected lab. As the Neurobiology program is very small, meetings between students and DGS are usually performed one on one to tailor discussions to the specific needs.
