

eHRAF World Cultures Complete Collection List

(August 2009 -- Installments 1- 55)

The following report contains information about HRAF's microfiche and electronic (eHRAF) versions of the Collection of Ethnography. Our online version of the collection is now called *eHRAF World Cultures* (<http://ehrafWorldCultures.yale.edu>). The cultures in this report are listed by major geographic region (Africa, Asia, Europe, Middle America and the Caribbean, Middle East, North America, Oceania, and South America) and by Outline of World Cultures (OWC) numbers within the regions.

With Installment 48, we completed the electronic conversion and updating of the 60-culture Probability Sample Files (PSF), a subset of HRAF designed to ensure representative coverage of the traditional and peasant cultures of the world. One well-described culture from each of 60 world regions was randomly selected for the PSF. (See column in report labelled "PSF.") In the process of retrospective conversion we review the contents of the microfiche file; we add new material and sometimes remove material that is too difficult to process electronically or that is redundant or tangential. Approximately 25-40% of each annual installment is new material not contained in the microfiche. Therefore you should expect that the information on time coverage, number of documents, and number of text pages per culture may differ in the electronic and microfiche collections. Installments 43-54 of the eHRAF Collection also contain 17 files on North American immigrant groups, most of the cultures of the former Yugoslavia, and some additional files converted from the microfiche.

Beginning with installment 49, we began to add cases by simple random sampling (SRS) from a revised list of cultures being prepared for a new edition of the Outline of World Cultures. (See the column in report labelled "SRS.") Some of these cases are new to the collection; those that are already in the collection will be updated and converted from microfiche. The new randomly added cases provide researchers with a second set of cases (in addition to the 60-culture Probability Sample Files) to use as a research sample. Representative samples are also ideal for teaching because they accurately represent the variety of cultures around the world.
