\* From 1960 to 1973, approximately 70-80% of the graduating classes responded to a questionnaire distributed to all seniors during their final spring semester. From 1974-1980, a similarly high proportion responded, but seniors were not surveyed until one year after graduation. In 1984, seniors were once again surveyed during their final spring semester, with a response rate of 76%. (Because this was the only class since 1974 surveyed prior to graduation, comparisons of this class should be made with caution.) The Classes of 1985, 1987 and 1989 were surveyed over the year following graduation, with a response rate of 77%. The Classes of 1990, 1992, 1994, 1996, 1998, 2000, 2002 and 2004 were surveyed over the year following graduation, with an overall response rate ranging from 76% to 82%.

\*\* Percentages for these years were adjusted (from the original study report) to exclude graduates who deferred graduate/professional study one year.

\*\*\* The total percentages may not equal 100% due to rounding.
